

Zeus Stark

Next Step Energy

Bio and Course Description

Zeus Stark, owner of Next Step Energy, has been selling, designing, installing and maintaining renewable energy systems for over 20 years. He has experienced the industry shift from the wild west of makeshift products to a code enforced trade with specifically engineered and listed equipment.

Residential Solar...What Is It Good For?

There is a wide demographic in the quality and complexities of solar installed in the residential market. The recent increased use of lithium batteries used for backup power has added another level to the complexity to these systems.

This course will discuss the different types of systems you might see, and how they can be integrated into the residential energy portfolio. Zeus will touch on some of the requirements that should be met for these systems and indicators that suggest a more in-depth assessment by a trade specialist may be warranted.
